- India's vegetable oil imports fell 23% on year to 1.0 mln tn in August, the Solvent Extractors' Association of India said. During Nov-Aug, the country imported nearly 10.7 mln tn of vegetable oil, down nearly 4.4% from the year-ago period. Edible oil imports were at 1.0 mln tn in August against nearly 1.3 mln tn a year ago, while for the 10 months of the 2020-21 oil marketing year, they fell to nearly 10.4 mln tn from 10.9 mln tn a year ago. - The US Department of Agriculture has revised its estimate for oilseed production in 2021-22 downwards to around 629.2 mln tn from 629.5 mln tn. The reduction in estimate is due to a decline in canola production in Canada and the European Union. However, that is expected to be largely offset by higher output in Australia. Higher groundnut production in India may also offset the decline in oilseed production globally. In the September report, the agency scaled up its global soybean output view to 384.4 mln tn from the previous month's estimate of 383.6 mln tn. The global ending stocks are estimated higher by 2.7 mln tn from the previous month's estimate, at 98.9 mln tn, the agency said, citing higher beginning stocks for China and ending stocks in the US. Global soymeal import is seen at 65.24 mln tn against the earlier estimate of 64.3 mln tn because of an increase in import of genetically-modified soymeal in India following the government's approval.
- The base import tax on crude palm oil has been slashed to 2.5% from 10%, while the tax on crude soyoil and crude sunflower oil has been reduced to 2.5% from 7.5%, the government said in a notification late on Friday. - Crushing of mustard seeds by oil millers declined over 31% on year to 550,000 tn in July, data from Marudhar Trading Agency. Mills had crushed 800,000 tn of the oilseed during the same period last year, and in June this year, they crushed 600,000 tn of mustard. Low arrivals in physical markets hit crushing operations. Arrivals of the oilseed fell to almost 500,000 tn in July from 640,000 tn a year ago.
- India is likely to produce around 10 mln tn of mustard in 2020-21 (Jul-Jun), up 35% from a year ago, due to higher acreage and favourable weather conditions, according to the Solvent Extractors' Association of India.
- Indian government slashed import duty of crude palm oil. The government cut import duty on crude palm oil by 10% to 27.5%, in the last week, to cool off soaring edible oil prices in domestic markets.
- India is likely to grow a record 10 mln tn mustard crop in 2020-21 (Jul-Jun), mainly due to the likelihood of a sharp rise in acreage, according to Solvent Extractors' Association of India. The government has targeted an all-time high crop of 12.5 mln tn for this rabi season. The upward revision in global production estimate is mainly due to a likely bigger crop in the US, Australia and Argentina. In 2021-22 season, the committee has estimated global ending stocks for the season are estimated at 19.7 mln tn, compared with 20.7 mln tn in the previous season. "Higher demand compared to production is expected to cause ending stocks to decline for the second year in a row. Global consumption is projected at 25.9 mln tn, compared with 25.7 mln tn last year. While global export for the season is pegged at 10.2 mln tn. The opening of economies, activities and business has revived consumer demand for textiles and clothing. Global production for the ongoing season is estimated at 24.9 mln tn, compared with 24.2 mln tn in the previous season. The rise has largely been attributed to higher production in the US. The downward revision in global production estimate is mainly due to a likely lower crop in the US, Brazil and Uzbekistan. In the US, production is seen at 17.3 mln bales in 2021-22 compared with 17.8 mln bales estimated earlier. Global cotton consumption is seen a tad higher at 123.3 mln bales in 2021-22, driven by a likely rise in demand from Bangladesh and Pakistan.
